More than half didn't beat the index.

Three years of PMS returns to 31 October 2026, measured against the S&P BSE 500 TRI — after the managers' own fees.

DATA AS ON	SOURCE	BENCHMARK	UNIVERSE
31 Oct 2026	APMI monthly report	S&P BSE 500 TRI	1,846 PMS strategies

FROM THE DESK

October was another red month for most portfolios: 1,397 of the 1,660 strategies with a monthly figure — more than four in five — closed it lower. It also flattered the one-year scoreboard. The index itself is down 7.2% over twelve months, so three in four strategies "beat" it over that window largely by falling less. We'd read that with care. One month is noise, and even one year is a weak signal — weaker still when the bar has dropped.

Three years is where skill starts to separate from luck, so that is the window this brief is built around. Over it, more than half of the strategies with a full record trailed a plain index. These figures are already net of each manager's fees and expenses — SEBI requires portfolio managers to report them that way — so this is roughly what investors actually kept. The few that beat the index in every window we measure are listed below, followed by a pair of strategies that make the same point from the other direction.

— PlanMyCashflows Research

57%

Over the **three years** to 31 Oct 2026, **578 of 1,014** strategies with a full record **returned less than the S&P BSE 500 TRI**, which compounded at 9.9% a year. The typical strategy — the median — managed 9.2%: about 0.7 percentage points a year behind the index, after fees.

THE SCORECARD

How many beat the index

OVER 1 YEAR	OVER 3 YEARS	IN ALL OF 1, 3 AND 5 YEARS
76%	**43%**	**34%**
1,084 of 1,420 · index −7.2%	436 of 1,014 · index 9.9% a year	231 of 686 with a 5-year record

As on 31 Oct 2026, three in four beat the index over a single year — a low bar, with the index itself down 7.2% — fewer than half did it over three, and about one in three managed it in every window. The longer and stricter the test, the shorter the list. That is the pattern this brief keeps returning to, and it is why we rank on alpha rather than on last month's chart.

ALPHA HONOUR ROLL

Beat the index over one, three and five years

Of the 231 strategies that cleared the index in all three windows, these are the five equity strategies with the largest three-year alpha, managing ₹100 Cr or more, one per manager. Alpha is return above the S&P BSE 500 TRI over the same three years, as on 31 Oct 2026. 1-year returns are absolute; 3- and 5-year returns are annualised. The index returned −7.2%, 9.9% and 8.7% over the same windows.

#	STRATEGY	3Y ALPHA	1Y	3Y	5Y	AUM
1	**Stallion Asset Core Fund** Stallion Asset Private Limited	+19.9	11.2%	29.8%	22.9%	₹10,674 Cr
2	**KRIIS Multicap Fund Strategy** KRIIS Portfolio Private Limited	+16.7	24.4%	26.6%	18.2%	₹450 Cr
3	**ValueQuest Vision** ValueQuest Investment Advisors Pvt. Ltd.	+15.8	1.2%	25.8%	23.0%	₹1,058 Cr
4	**Diversified** Wallfort Fund Management LLP	+15.8	−2.4%	25.7%	25.7%	₹641 Cr
5	**Aggressive Long Term Capital Appreciation** Dalal & Broacha Stock Broking Pvt. Ltd.	+14.0	30.6%	23.9%	24.9%	₹213 Cr

The reality check

Two strategies, two almost identical bad years to 31 Oct 2026. Judged on the last twelve months alone, you could not tell them apart. The longer record tells a completely different story about each.

Healthcare Portfolio

InCred Asset Management

1 year	−8.9%
3 years, a year	+18.8%
5 years, a year	+14.8%
3-year alpha vs index	+8.9

A WEAK YEAR INSIDE A STRONG RECORD

Little Champs

Marcellus Investment Managers

1 year	−8.8%
3 years, a year	−0.5%
5 years, a year	−3.4%
3-year alpha vs index	−10.5

A WEAK YEAR INSIDE A WEAK RECORD

A weak year is not, on its own, a reason to leave a strategy, and a familiar name is not, on its own, a reason to stay. The multi-year record against the index is the more useful signal — and because these returns are already after fees, it shows what the manager actually delivered over a plain index you could own for a fraction of the cost.

How to read this. Returns are time-weighted (TWRR) at the strategy level, as reported to APMI, net of fees and expenses. 1-year figures are absolute; longer windows are annualised. Alpha is a strategy's return minus the S&P BSE 500 TRI over the same window. Strategies reporting exactly 0.00% for a window are treated as having no figure for it, and returns outside −95% to +300% are excluded. Your own return depends on when you invested.

Past performance is not indicative of future returns. This brief is for information and education only. It is not investment advice, a research report, or a recommendation to buy, sell or subscribe to any strategy; named strategies illustrate a data point and are not endorsements. PMS investments carry market and concentration risk, including loss of capital, and require a minimum investment of ₹50 lakh. Figures are not verified or certified by SEBI. Verify a manager's SEBI registration and consider your own objectives before investing.
